

EXACT CURE

ALWAYS GET THE DATA

Accelerate production and improve quality with industry-leading efficiency.

The highest quality cure with the lowest maintenance and operating costs.

Compared to steam/hydraulic systems, electric curing is virtually maintenance-free. No water softening, filters, burners, pipes, pumps or pressure vessels to maintain. Simply do a visual check on the breakers and contactors annually. Over 90% of the system's heat goes into the product.

Control the temperature of your concrete uniformly throughout the bed. Checking the system takes a few seconds at startup. Failure during a cure is almost unheard of.

Our wireless temperature loggers communicate with our curing controller to carefully control the application of heat and follow your predefined curves, keeping concrete temperatures within specifications.

EXACT Monitor

Eliminate waste and accelerate timelines with critical concrete and ambient data at your fingertips.

EXACT Match

Confidently advance your projects with best-in-class break accuracy.

EXACT Mix

Optimize your concrete mixes by analyzing fresh and hardened properties.

EXACT Cure

Accelerate production and improve quality with industry-leading efficiency.

EXACT Track

Digitally manage your elements for full accountability in your production and QC processes.
